

The top trends in tech—executive summary download

The top trends in tech: Introduction

In the next decade, we'll [experience more progress](#) than in the past 100 years combined, as technology reshapes health and materials sciences, energy, transportation, and a wide range of other industries and domains. The implications for corporations are broad. In the following charts—and in the related interactive—we bring to bear a unique methodology for sorting out the technology trends that matter most for companies and executives.

Unifying and underlying all these trends is the combinatorial effect of massively faster computation, which is propelling new convergences between technologies, startling breakthroughs in health and materials sciences, astonishing new product and service functionalities, and an irresistible foundation for the reinvention of companies, markets, industries, and sectors.

Will your organization make the most of these trends to pursue new heights of rapid innovation, improved performance, and significant achievement? Start by looking through the executive-summary charts that follow—and don't forget to explore the more detailed research you'll find in our related interactive, "The top trends in tech."

Advancing technology has always spurred economic development, and now it's accelerating even faster.

Changes in GDP per capita brought about by technological investments, 1000–2000 AD, by country, indexed¹

“In the next decade, we will experience more progress than in the past 100 years.”

–Peter Diamandis,
Cofounder of Singularity University

1. Estimated global GDP per capita in USD, adjusted to GDP in 1000 AD = 1; not exhaustive; 2. Includes Industry 4.0 (debate exists as to whether Industry 4.0 is seen as the Fourth Industrial Revolution or simply as the second phase of the Third Industrial Revolution).

We prioritized more than 40 individual technologies by technical maturity, industry impact, and momentum.

We distilled seven cross-industry and three industry-specific trends based on prioritized technologies...

Technology trends and underlying technologies

Industry-agnostic trends

1 Next-level process automation...

Industrial IoT¹
Robots/cobots²/RPA³

... and process virtualization

Digital twins
3-D/4-D printing

2 Future of connectivity

5G and IoT connectivity

3 Distributed infrastructure

Cloud and edge computing

4 Next-generation computing

Quantum computing
Neuromorphic chips (ASICs⁴)

5 Applied AI

Computer vision, natural-language processing, and speech technology

6 Future of programming

Software 2.0

7 Trust architecture

Zero-trust security
Blockchain

Industry-specific trends

8 Bio Revolution

Biomolecules/"-omics"/
biosystems

Biomachines/biocomputing/augmentation

9 Next-generation materials

Nanomaterials, graphene and 2-D materials, molybdenum disulfide nanoparticles

10 Future of clean technologies

Nuclear fusion

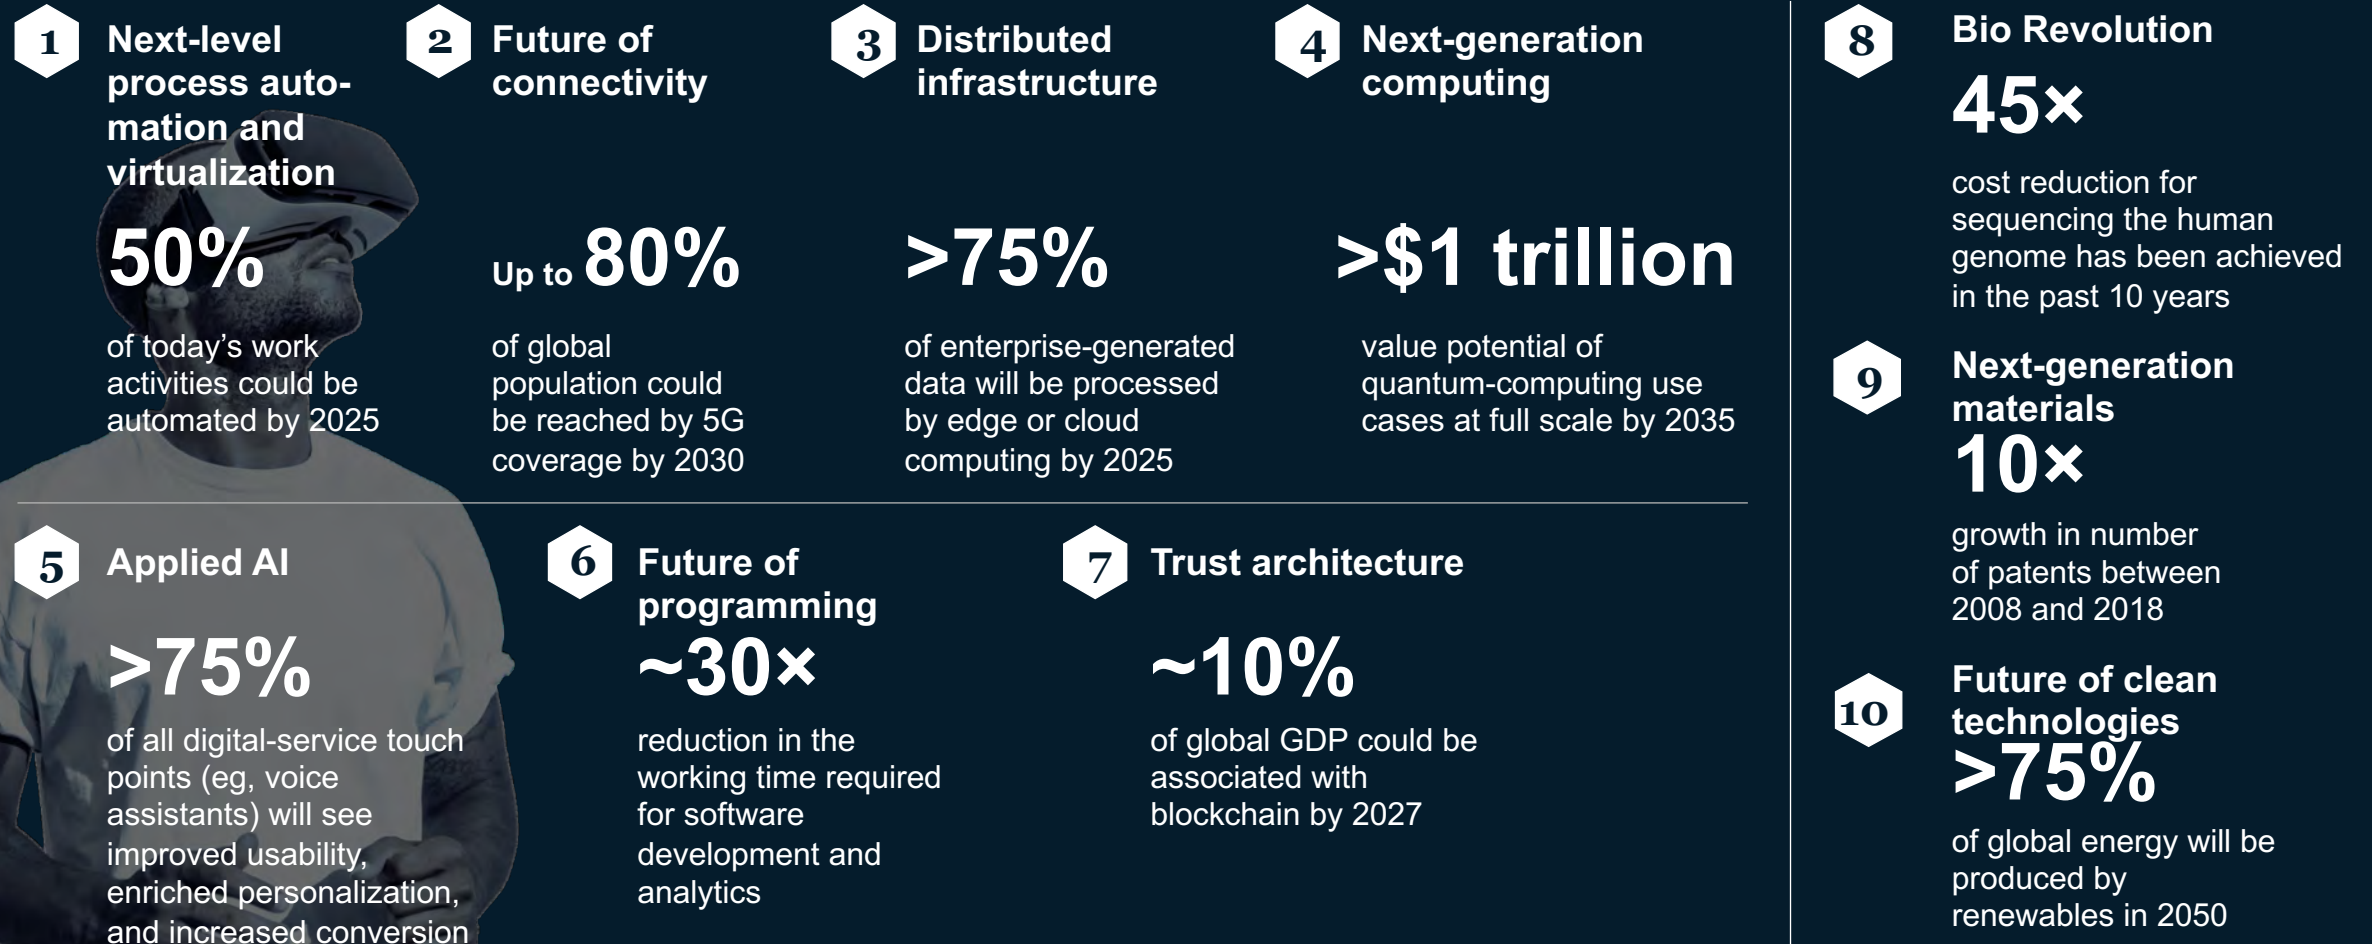

Smart distribution/metering

Battery/battery storage

Carbon-neutral energy generation

...that could reshape the future of markets and industries in the next few decades.

Effects of technology trends up to 2050

Seven cross-industry technology trends will disrupt company strategy, organization, and operations...

Disruptions across 7 cross-industry trends

Tech-trend clusters

Disruptions

1 A. Next-level process automation

Industrial IoT¹
Robots/cobots²/
RPA³

Self-learning, reconfigurable robots will drive automation of physical processes beyond routine activities to include less predictable ones, leading to fewer people working in these activities and a **reconfiguration of the workforce**; policy makers will be challenged to address labor displacement, even as organizations will need to rethink the [future of work](#)

B. Process virtualization

Digital twins
3-D/4-D printing

Advanced simulations and 3-D/4-D printing will virtualize and dematerialize processes, shortening development cycles as ever-shorter product and service life cycles continue to accelerate, further **pressuring profit pools and speeding strategic and operational practices** that [tightly correlate](#) with successful digital efforts

2 Future of connectivity

5G and IoT connectivity

With 5G reaching up to 80% of the global population by 2030, enhanced coverage and speed of connections across long and short distances will enable **new services** (eg, remote surgeries), **business models** (eg, connected services), and **next-generation customer experiences** (eg, live VR)

3 Distributed infrastructure

Cloud & edge computing

Wide availability of IT infrastructure and services through cloud computing could **shift demand for on-premise IT infrastructure and reduce the need for IT setup and maintenance**, while the democratization of infrastructure will help **shift competitive advantage** away from IT to software development and talent.

Seven cross-industry technology trends will disrupt company strategy, organization, and operations... (continued)

Disruptions across 7 cross-industry trends

Tech-trend clusters

Disruptions

4 Next-generation computing

Quantum computing
ASICs⁴

High computational capabilities allow new use cases, such as molecule-level simulation, reducing the empirical expertise and testing needed for a range of applications and leading to the following: disruption across industries such as materials, chemicals, and pharmaceuticals; highly **personalized product developments**, for instance in medicine; the ability to break the majority of **cryptographic security algorithms**, disrupting today's cybersecurity approaches; and the faster diffusion of **self-driving vehicles**

5 Applied AI

Computer vision, natural-language processing, and speech technology

As AI matures and continues to scale, it will enable **new applications** (eg, more rapid development cycles and detailed customer insights), **eliminate labor for repetitive tasks** (eg, filing, document preparation, and indexing), and support the **global reach of highly specialized services and talent** (eg, improved telemedicine and the ability of specialized engineers to work on oil rigs from the safety of land)

6 Future of programming

Software 2.0

Software 2.0 creates new ways of writing software and reduces complexity; however, as companies look to **scale their software-development capabilities**, they will need to **master DataOps and MLOps⁵ practices** and technology to make the most of the future of programming

7 Trust architecture

Zero-trust security
Blockchain

Trust architectures help commercial entities and individuals **establish trust and conduct business without need for intermediaries**, even as zero-trust-security measures address growing cyberattacks; countries and regulatory bodies may likely have to **rethink regulatory oversight**; distributed-ledger technologies will **reduce cost and enable transformative business models**

4. Application-specific integrated circuits.

5. DataOps supports and enables better data analytics; MLOps combines infrastructure, tools, and workflows to provide faster and more reliable machine-learning pipelines.

...and three industry-specific technology trends can help solve humanity's biggest challenges.

Disruptions across 3 cross-industry trends

Tech-trend clusters

8 Bio Revolution

Biomolecules/“-omics”/
Biosystems
Biomachines/biocomputing/
augmentation

Disruptions

“-omics” enable **rapid analysis of genetic materials** and open up possibilities (eg, for rapid vaccine development, personalized medicine, and gene therapy)

Using **biological material for computing purposes** can enable a vast expansion of data storage using DNA as the information medium

9 Next-generation materials

Nanomaterials,
graphene and 2-D
materials, and
molybdenum disulfide
nanoparticles

By changing the economics of a wide range of products and services, next-generation materials may change industry economics and reconfigure companies within them (eg, by allowing for the integration of **sustainable materials and renewable energy sources** into processes), even as innovations in materials science help create **smart materials with programmable properties** that respond to stimuli from external factors

10 Future of clean technologies

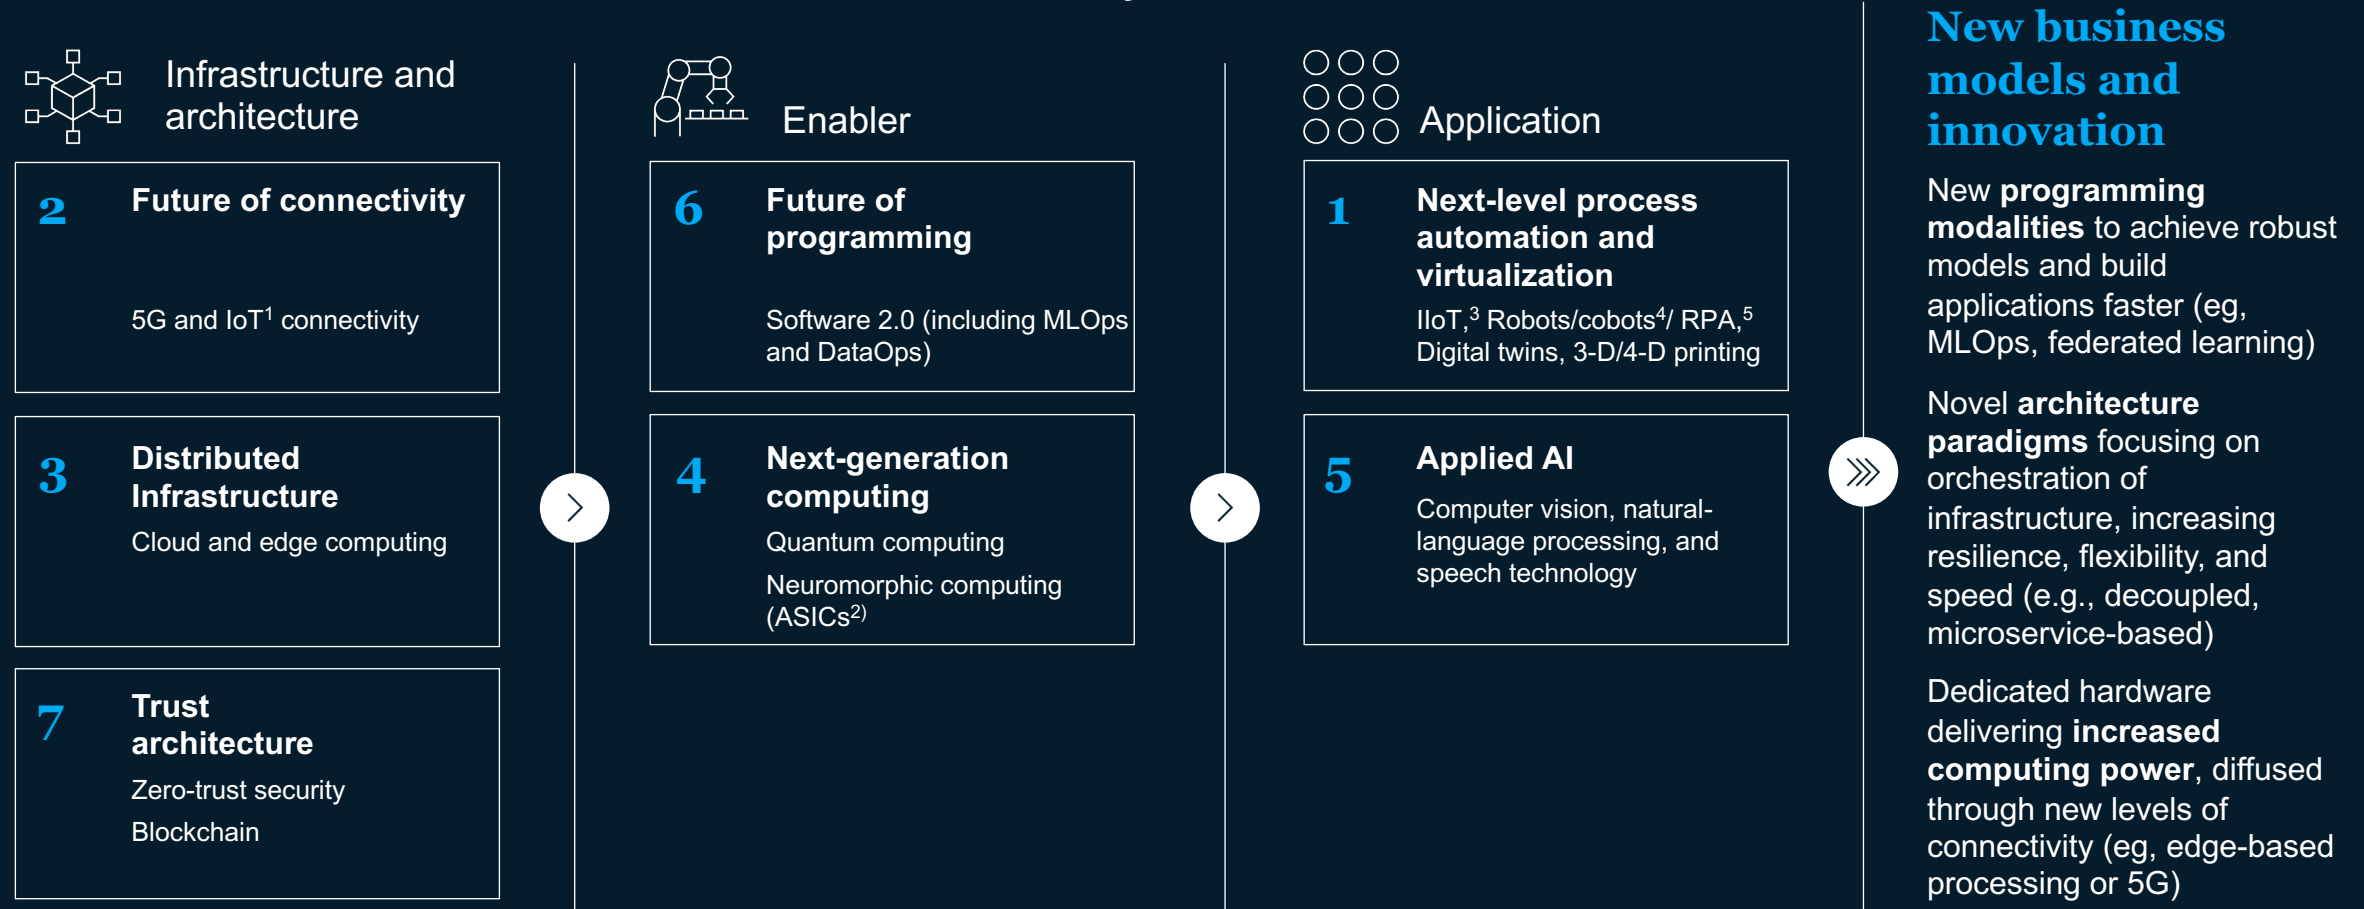

Nuclear fusion
Smart distribution/metering
Battery/battery storage
Carbon-neutral energy generation

As clean technologies come down the cost curve, they become increasingly disruptive to traditional business models, creating new **business-building** opportunities, **operational-improvement** programs driven by clean technologies, and new **climate-change mandates** that could alter the balance sheet of carbon-intense sectors—all while providing the **green energy** needed to sustain exponential technology growth

The combinatorial effect of technology amplifies and accelerates new business models and innovation...

Mutually reinforcing technology leads to exponential growth.

Outcomes of 3 levels of combinatorial effects on cross-industry tech trends

...changing the industry landscape by disrupting the status quo and creating new opportunities.

Combination of relevant tech trends will have far-reaching impact across the industry

Example trends and disruptions across industry horizontals

Cross-industry horizontal	Relevant trends	Disruptions
Automation and productivity transformations across value chain	1 Next-level process automation and virtualization	“Grid sharing” technology to create a virtual power plant ¹ powered by tens of thousands of EV batteries, where cloud platform manages individual batteries and AI system manages loads across them
	3 Distributed infrastructure	
	4 Next-generation computing	Use AI to empower credit-card sales team; the sales-advisory tool determines the best product for the customer
	5 Applied AI	
	6 Future of programming	
Next-generation customer experience	2 Future of connectivity	Novel-risk scoring and claims processing in insurance using blended data from multiple new sources (including computer vision over satellites); chat bots to handle customer acquisition and claims, without humans Seamless customer experience in the “retail store of the future,” which gathers and connects data, including RFID, ² keeping an eagle eye on replenishment and providing data-lake-enabling analytics
	5 Applied AI	
Transformation in product/research development	1 Next-level process automation and virtualization	Search potential “biological space” with machine-learning digital simulations of molecular properties; develop novel and sustainable materials
	5 Applied AI	
New business models, products, and services	1 Next-level process automation and virtualization	New business model in agriculture where underground soil probes monitor temperature and moisture, then relay data back to server every 15 minutes over cellular network; data are used to improve yield, develop fertilization plan, and optimize irrigation
	2 Future of connectivity	

1. A virtual power plant is a cloud-based distributed power plant, in which power from distributed energy resources (eg, solar power from individual households) is stored in batteries and can be distributed in the grid. 2. Radio-frequency identification.

Tech trends affect all sectors, but their impact varies by industry.

Estimated effects of tech trends across select sectors

		Healthcare sector		Mobility sector		Industry 4.0 sector			Enabler sector	
Tech trend		Pharmaceuticals	Health	Transport and logistics	Automotive	Advanced industries	Chemicals	Electronics	Information	Telecommunications
1	Next-level process automation	Moderate influence	Moderate influence	Major influence	Major influence	Major influence	Major influence	Major influence	Major influence	Major influence
9	Next-generation materials	Moderate influence	Limited influence	Limited influence	Moderate influence	Major influence	Moderate influence	Major influence	Moderate influence	Moderate influence
5	Applied AI	Major influence	Major influence	Major influence	Major influence	Moderate influence	Moderate influence	Major influence	Major influence	Major influence
10	Future of clean technologies	Limited influence	Limited influence	Limited influence	Moderate influence	Moderate influence	Major influence	Moderate influence	Moderate influence	Moderate influence
2	Future of connectivity	Major influence	Moderate influence	Major influence	Major influence	Limited influence	Limited influence	Major influence	Major influence	Major influence
8	Bio Revolution	Major influence	Major influence	Limited influence	Limited influence	Moderate influence	Limited influence	Limited influence	Limited influence	Limited influence
4	Next-generation computing	Major influence	Limited influence	Moderate influence	Moderate influence	Moderate influence	Major influence	Major influence	Major influence	Major influence
7	Trust architecture	Major influence	Major influence	Moderate influence	Limited influence	Moderate influence	Limited influence	Moderate influence	Major influence	Major influence
3	Distributed infrastructure	Moderate influence	Moderate influence	Moderate influence	Major influence	Limited influence	Limited influence	Moderate influence	Major influence	Major influence
6	Future of programming	Major influence	Major influence	Major influence	Major influence	Moderate influence	Moderate influence	Moderate influence	Major influence	Major influence

Executives must think through three primary questions as they consider where and when to invest, while getting the timing right.

Scale of impact

How important is this trend for a given industry or company?

Will this technology fundamentally disrupt existing value pools?

Which technologies matter most for any given company?

Will implementing these technologies give the company a competitive advantage?

Technical maturity

How fast do you need to react?

Is it the right time to scale any of the technologies given their stage and speed of maturity?

Fit with the organization

How do you approach the technology implementation?

How should you operationalize technologies to capture value?

Front runners in tech adoption capture the most benefit.

Economic gains by AI-adoption cohort, front runners, followers, and laggards (simulation)

Relative changes in cash flow, Percent change per cohort, cumulative

Front-runner breakdown, Percent change

Laggard breakdown, Percent change

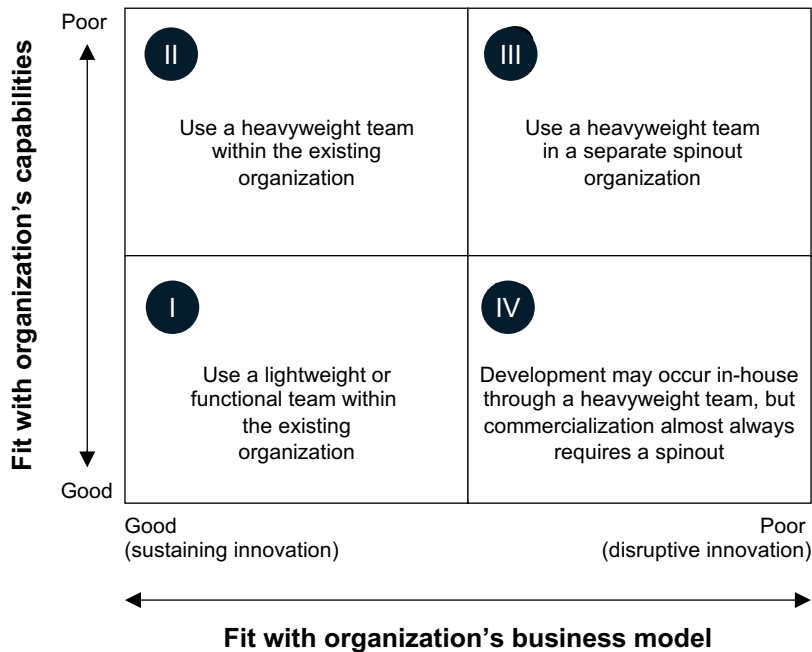

Note: Numbers are simulated figures to provide directional perspectives rather than forecast.
Source: McKinsey Global Institute analysis

As you implement new technologies, pay attention to fit with business model and organizational capabilities...

Taking the current organization into consideration increases the likelihood of success.

Archetypes of technology implementation

Ecosystems can complement these strategies and help speed up technology adoption

Collaboration with other players reduces risks and increases breadth of technology adoption

Ecosystems help companies access talent and technologies in the market at a faster speed

	I Lightweight or functional team in organization	II Heavyweight team within organization	III Heavyweight team in separate entity	IV Development within organization, commercialization in separate entity
Description	Forming a rollout plan for the entire company with widespread ownership—often with different degrees of customizations, such as road-map and training-program alterations, depending on the nature of the technology	Forming a special unit to execute projects with a powerful team, preferably composed of individuals from both within and outside the existing organization	Establishing, growing, or launching initiatives with a more radical character to the core business within the context of a stand-alone entity; the entity is still feeding of the resources from the mother organization and can be built, acquired, or a joint venture	Creating a centralized way of providing the organization with a specific technology
Ownership	Each business-unit boss	CEO	CEO of the separate unit/company	Chief technology officer/head of IT
Criteria for selection	<p>Having a company-wide effect early in the implementation process</p> <p>Existing culture and processes can handle the change, and the technology is easy to understand</p> <p>Is seen as a hygiene factor in terms of customer requirement</p> <p>Easy to recruit the needed capability</p>	<p>Technological maturity of the organization is generally low, and it belongs to a traditional industry</p> <p>The resistance towards change is relatively high</p> <p>Experimentation and iteration required</p> <p>Scarcity of talent</p> <p>Important to the core business offering</p>	<p>Nature of the technology is disruptive/radically innovative from current products/service offerings</p> <p>Processes required differ from those of the existing operations</p> <p>Cultural requirements differ from those the existing operations</p> <p>Good access to capital</p>	<p>No specific development needed</p> <p>Mid level complexity and maintenance</p> <p>Technology is possible to distribute and control from a central unit</p> <p>Privacy and security regulations might have a severe effect</p>

...while taking into account five primary areas of risk.

5 areas of risk for new technology implementation

Business

Taking primary responsibility for soundness and application of data ethics and maintaining a data-driven culture

Developing appropriate processes and control

Adhering to regulatory and policy requirements

Fostering a culture of data-driven decision making and ethics as an enabler and not as an inhibitor of business-value creation

Society

Safeguarding of societal values from business actions and maintaining internal awareness about societal duty of organization

Engaging actively in societal development and local communities

Proactively waterproofing business actions to be in line with societal norms and promoting inclusion

Openly embracing diversity

Operational risk

Establish robustness of processes and control and mitigate operational risk

Monitoring of processes and controls to operationalize data-ethics codes

Measuring and prioritizing operational risks

Leading enterprise-wide activities to reduce risk through an appropriate data-driven culture (eg, avoid biases)

Compliance

Ensure compliance with a data-driven culture, regulations, and internal policies

Policy design in accordance with regulatory requirements

Information, education, and advice for business on regulatory and policy requirements

Continuous surveys and monitoring of activities and reporting/managing of incidents due to noncompliance

Legal

Proactively advise business lines and rest of organization with legal matters

Expert advice in transactions

External counsel

Advice on general internal-management issues requiring legal expertise, (eg, data-access restrictions)

About the research

This research examines a range of factors to identify the technology trends that matter most to top executives and the companies they lead. For every trend, we calculated a momentum score based on the growth rate the technologies underlying the trends, which we derived from an in-depth analysis of six proxy metrics: patent filings, publications, news mentions, online search trends, private-investment amount, and the number of companies making investments. We then rolled the scores of the underlying technologies into a single composite score for the trend itself. Comparing composite momentum scores will help executives recognize how much disruption a trend is likely to cause and how soon that disruption will have business implications.

The underlying metrics are diverse, the better to account for the varied perspectives each represents. The number of research publications within a field provides a leading indicator of trends as they emerge. Patent filings give a measure of the importance placed on a particular trend by corporations. The quantity of private investment, as well as the number of companies making investments, indicates whether a clear financial interest exists for a specific trend. Finally, search trends and news coverage reveal the level of public interest in a trend. Combining early indicators with measures of public and financial interest creates a holistic view of each trend and provides a good way to rank and compare their potential impact. Using the growth rate as the basis of the momentum score differentiates areas that are merely large from those that are on their way to massive.

Finally, we syndicated our analytical results with external experts on McKinsey's Technology Council, leading to a unique perspective that combines research analysis with qualitative insights from some of the leading thinkers of our time.
